Automatic Termination Analysis for TRSs [Lankford, 1979]

\mathcal{R}_{plus} :

$$\begin{array}{lcl} \text{plus}(\mathcal{O}, y) & \rightarrow & y \\ \text{plus}(\text{s}(x), y) & \rightarrow & \text{s}(\text{plus}(x, y)) \end{array}$$

Automatic Termination Analysis for TRSs [Lankford, 1979]

\mathcal{R}_{plus} :

$$\begin{aligned} \text{plus}(\mathcal{O}, y) &\rightarrow y \\ \text{plus}(s(x), y) &\rightarrow s(\text{plus}(x, y)) \end{aligned}$$

Goal: Find well-founded order \succ such that $s \rightarrow_{\mathcal{R}} t$ implies $s \succ t$

Automatic Termination Analysis for TRSs [Lankford, 1979]

\mathcal{R}_{plus} :

$$\begin{aligned} \text{plus}(\mathcal{O}, y) &\succ y \\ \text{plus}(s(x), y) &\succ s(\text{plus}(x, y)) \end{aligned}$$

Goal: Find well-founded order \succ such that $s \rightarrow_{\mathcal{R}} t$ implies $s \succ t$

Automatic Termination Analysis for TRSs [Lankford, 1979]

\mathcal{R}_{plus} :

$$\begin{aligned} \text{plus}(\mathcal{O}, y) &\succ y \\ \text{plus}(s(x), y) &\succ s(\text{plus}(x, y)) \end{aligned}$$

Goal: Find monotonic, natural polynomial interpretation Pol such that

$$\ell \rightarrow r \in \mathcal{R} \text{ implies } Pol(\ell) > Pol(r)$$

Automatic Termination Analysis for TRSs [Lankford, 1979]

\mathcal{R}_{plus} :

$$\begin{aligned} \text{plus}(\mathcal{O}, y) &\succ y \\ \text{plus}(s(x), y) &\succ s(\text{plus}(x, y)) \end{aligned}$$

Goal: Find monotonic, natural polynomial interpretation Pol such that

$$\ell \rightarrow r \in \mathcal{R} \text{ implies } Pol(\ell) > Pol(r)$$

Pol monotonic, natural polynomial interpretation

- natural: $Pol(f) = f_{Pol}$ a polynomial with coefficients $\in \mathbb{N}$
- monotonic: if $x > y$, then $f_{Pol}(\dots, x, \dots) > f_{Pol}(\dots, y, \dots)$

Automatic Termination Analysis for TRSs [Lankford, 1979]

 \mathcal{R}_{plus} :

$$\begin{aligned} Pol(\text{plus}(\mathcal{O}, y)) &> Pol(y) \\ Pol(\text{plus}(s(x), y)) &> Pol(s(\text{plus}(x, y))) \end{aligned}$$

Goal: Find monotonic, natural polynomial interpretation Pol such that

$$\ell \rightarrow r \in \mathcal{R} \text{ implies } Pol(\ell) > Pol(r)$$

Pol monotonic, natural polynomial interpretation

- natural: $Pol(f) = f_{Pol}$ a polynomial with coefficients $\in \mathbb{N}$
- monotonic: if $x > y$, then $f_{Pol}(\dots, x, \dots) > f_{Pol}(\dots, y, \dots)$

Automatic Termination Analysis for TRSs [Lankford, 1979]

 \mathcal{R}_{plus} :

$$\begin{aligned} Pol(\text{plus}(\mathcal{O}, y)) &> Pol(y) \\ Pol(\text{plus}(s(x), y)) &> Pol(s(\text{plus}(x, y))) \end{aligned}$$

Goal: Find monotonic, natural polynomial interpretation Pol such that

$$\ell \rightarrow r \in \mathcal{R} \text{ implies } Pol(\ell) > Pol(r)$$

Pol monotonic, natural polynomial interpretation

- natural: $Pol(f) = f_{Pol}$ a polynomial with coefficients $\in \mathbb{N}$
- monotonic: if $x > y$, then $f_{Pol}(\dots, x, \dots) > f_{Pol}(\dots, y, \dots)$

$$\begin{aligned} \mathcal{O}_{Pol} &= 0 \\ s_{Pol}(x) &= x + 1 \\ \text{plus}_{Pol}(x, y) &= 2x + y + 1 \end{aligned}$$

Automatic Termination Analysis for TRSs [Lankford, 1979]

\mathcal{R}_{plus} :

$$\begin{aligned} Pol(\text{plus}(\mathcal{O}, y)) &> Pol(y) \\ Pol(\text{plus}(s(x), y)) &> Pol(s(\text{plus}(x, y))) \end{aligned}$$

Goal: Find monotonic, natural polynomial interpretation Pol such that

$$\ell \rightarrow r \in \mathcal{R} \text{ implies } Pol(\ell) > Pol(r)$$

Pol monotonic, natural polynomial interpretation

- natural: $Pol(f) = f_{Pol}$ a polynomial with coefficients $\in \mathbb{N}$
- monotonic: if $x > y$, then $f_{Pol}(\dots, x, \dots) > f_{Pol}(\dots, y, \dots)$

$$\begin{aligned} \mathcal{O}_{Pol} &= 0 \\ s_{Pol}(x) &= x + 1 \\ \text{plus}_{Pol}(x, y) &= 2x + y + 1 \end{aligned}$$

Automatic Termination Analysis for TRSs [Lankford, 1979]

\mathcal{R}_{plus} :

$$\begin{aligned} \text{plus}_{Pol}(\mathcal{O}_{Pol}, y) &> y \\ Pol(\text{plus}(s(x), y)) &> Pol(s(\text{plus}(x, y))) \end{aligned}$$

Goal: Find monotonic, natural polynomial interpretation Pol such that

$$\ell \rightarrow r \in \mathcal{R} \text{ implies } Pol(\ell) > Pol(r)$$

Pol monotonic, natural polynomial interpretation

- natural: $Pol(f) = f_{Pol}$ a polynomial with coefficients $\in \mathbb{N}$
- monotonic: if $x > y$, then $f_{Pol}(\dots, x, \dots) > f_{Pol}(\dots, y, \dots)$

$$\begin{aligned} \mathcal{O}_{Pol} &= 0 \\ s_{Pol}(x) &= x + 1 \\ \text{plus}_{Pol}(x, y) &= 2x + y + 1 \end{aligned}$$

Automatic Termination Analysis for TRSs [Lankford, 1979]

\mathcal{R}_{plus} :

$$\begin{aligned} \text{plus}_{Pol}(0, y) &> y \\ Pol(\text{plus}(s(x), y)) &> Pol(s(\text{plus}(x, y))) \end{aligned}$$

Goal: Find monotonic, natural polynomial interpretation Pol such that

$$\ell \rightarrow r \in \mathcal{R} \text{ implies } Pol(\ell) > Pol(r)$$

Pol monotonic, natural polynomial interpretation

- natural: $Pol(f) = f_{Pol}$ a polynomial with coefficients $\in \mathbb{N}$
- monotonic: if $x > y$, then $f_{Pol}(\dots, x, \dots) > f_{Pol}(\dots, y, \dots)$

$$\begin{aligned} \mathcal{O}_{Pol} &= 0 \\ s_{Pol}(x) &= x + 1 \\ \text{plus}_{Pol}(x, y) &= 2x + y + 1 \end{aligned}$$

Automatic Termination Analysis for TRSs [Lankford, 1979]

\mathcal{R}_{plus} :

$$\begin{aligned} 2 \cdot 0 + y + 1 &> y \\ Pol(\text{plus}(s(x), y)) &> Pol(s(\text{plus}(x, y))) \end{aligned}$$

Goal: Find monotonic, natural polynomial interpretation Pol such that

$$\ell \rightarrow r \in \mathcal{R} \text{ implies } Pol(\ell) > Pol(r)$$

Pol monotonic, natural polynomial interpretation

- natural: $Pol(f) = f_{Pol}$ a polynomial with coefficients $\in \mathbb{N}$
- monotonic: if $x > y$, then $f_{Pol}(\dots, x, \dots) > f_{Pol}(\dots, y, \dots)$

$$\begin{aligned} \mathcal{O}_{Pol} &= 0 \\ s_{Pol}(x) &= x + 1 \\ \text{plus}_{Pol}(x, y) &= 2x + y + 1 \end{aligned}$$

Automatic Termination Analysis for TRSs [Lankford, 1979]

\mathcal{R}_{plus} :

$$\begin{array}{c} y+1 > y \\ Pol(\text{plus}(s(x), y)) > Pol(s(\text{plus}(x, y))) \end{array}$$

Goal: Find monotonic, natural polynomial interpretation Pol such that

$$\ell \rightarrow r \in \mathcal{R} \text{ implies } Pol(\ell) > Pol(r)$$

Pol monotonic, natural polynomial interpretation

- natural: $Pol(f) = f_{Pol}$ a polynomial with coefficients $\in \mathbb{N}$
- monotonic: if $x > y$, then $f_{Pol}(\dots, x, \dots) > f_{Pol}(\dots, y, \dots)$

$$\begin{array}{rcl} \mathcal{O}_{Pol} & = & 0 \\ s_{Pol}(x) & = & x + 1 \\ \text{plus}_{Pol}(x, y) & = & 2x + y + 1 \end{array}$$

Automatic Termination Analysis for TRSs [Lankford, 1979]

\mathcal{R}_{plus} :

$$\begin{array}{rcl} y + 1 & > & y \\ \textcolor{red}{Pol}(\text{plus}(s(x), y)) & > & \textcolor{red}{Pol}(s(\text{plus}(x, y))) \end{array}$$

Goal: Find monotonic, natural polynomial interpretation Pol such that

$$\ell \rightarrow r \in \mathcal{R} \text{ implies } Pol(\ell) > Pol(r)$$

Pol monotonic, natural polynomial interpretation

- natural: $Pol(f) = f_{Pol}$ a polynomial with coefficients $\in \mathbb{N}$
- monotonic: if $x > y$, then $f_{Pol}(\dots, x, \dots) > f_{Pol}(\dots, y, \dots)$

$$\begin{array}{rcl} \mathcal{O}_{Pol} & = & 0 \\ s_{Pol}(x) & = & x + 1 \\ \text{plus}_{Pol}(x, y) & = & 2x + y + 1 \end{array}$$

Automatic Termination Analysis for TRSs [Lankford, 1979]

\mathcal{R}_{plus} :

$$\begin{array}{rcl} y + 1 & > & y \\ plus_{Pol}(s_{Pol}(x), y) & > & s_{Pol}(plus_{Pol}(x, y)) \end{array}$$

Goal: Find monotonic, natural polynomial interpretation Pol such that

$$\ell \rightarrow r \in \mathcal{R} \text{ implies } Pol(\ell) > Pol(r)$$

Pol monotonic, natural polynomial interpretation

- natural: $Pol(f) = f_{Pol}$ a polynomial with coefficients $\in \mathbb{N}$
- monotonic: if $x > y$, then $f_{Pol}(\dots, x, \dots) > f_{Pol}(\dots, y, \dots)$

$$\begin{array}{rcl} \mathcal{O}_{Pol} & = & 0 \\ s_{Pol}(x) & = & x + 1 \\ plus_{Pol}(x, y) & = & 2x + y + 1 \end{array}$$

Automatic Termination Analysis for TRSs [Lankford, 1979]

\mathcal{R}_{plus} :

$$\begin{array}{rcl} y + 1 & > & y \\ plus_{Pol}(x + 1, y) & > & s_{Pol}(2x + y + 1) \end{array}$$

Goal: Find monotonic, natural polynomial interpretation Pol such that

$$\ell \rightarrow r \in \mathcal{R} \text{ implies } Pol(\ell) > Pol(r)$$

Pol monotonic, natural polynomial interpretation

- natural: $Pol(f) = f_{Pol}$ a polynomial with coefficients $\in \mathbb{N}$
- monotonic: if $x > y$, then $f_{Pol}(\dots, x, \dots) > f_{Pol}(\dots, y, \dots)$

$$\begin{array}{rcl} \mathcal{O}_{Pol} & = & 0 \\ s_{Pol}(x) & = & x + 1 \\ plus_{Pol}(x, y) & = & 2x + y + 1 \end{array}$$

Automatic Termination Analysis for TRSs [Lankford, 1979]

\mathcal{R}_{plus} :

$$\begin{aligned} y + 1 &> y \\ 2(x + 1) + y + 1 &> (2x + y + 1) + 1 \end{aligned}$$

Goal: Find monotonic, natural polynomial interpretation Pol such that

$$\ell \rightarrow r \in \mathcal{R} \text{ implies } Pol(\ell) > Pol(r)$$

Pol monotonic, natural polynomial interpretation

- natural: $Pol(f) = f_{Pol}$ a polynomial with coefficients $\in \mathbb{N}$
- monotonic: if $x > y$, then $f_{Pol}(\dots, x, \dots) > f_{Pol}(\dots, y, \dots)$

$$\begin{aligned} \mathcal{O}_{Pol} &= 0 \\ s_{Pol}(x) &= x + 1 \\ plus_{Pol}(x, y) &= 2x + y + 1 \end{aligned}$$

Automatic Termination Analysis for TRSs [Lankford, 1979]

\mathcal{R}_{plus} :

$$\begin{array}{rcl} y + 1 & > & y \\ 2x + y + 3 & > & 2x + y + 2 \end{array}$$

Goal: Find monotonic, natural polynomial interpretation Pol such that

$$\ell \rightarrow r \in \mathcal{R} \text{ implies } Pol(\ell) > Pol(r)$$

Pol monotonic, natural polynomial interpretation

- natural: $Pol(f) = f_{Pol}$ a polynomial with coefficients $\in \mathbb{N}$
- monotonic: if $x > y$, then $f_{Pol}(\dots, x, \dots) > f_{Pol}(\dots, y, \dots)$

$$\begin{array}{rcl} \mathcal{O}_{Pol} & = & 0 \\ s_{Pol}(x) & = & x + 1 \\ plus_{Pol}(x, y) & = & 2x + y + 1 \end{array}$$

Automatic Termination Analysis for TRSs [Lankford, 1979]

\mathcal{R}_{plus} :

$$\begin{array}{rcl} y + 1 & > & y \\ 2x + y + 3 & > & 2x + y + 2 \end{array}$$

Goal: Find monotonic, natural polynomial interpretation Pol such that

$$\ell \rightarrow r \in \mathcal{R} \text{ implies } Pol(\ell) > Pol(r)$$

Pol monotonic, natural polynomial interpretation

- natural: $Pol(f) = f_{Pol}$ a polynomial with coefficients $\in \mathbb{N}$
- monotonic: if $x > y$, then $f_{Pol}(\dots, x, \dots) > f_{Pol}(\dots, y, \dots)$

$$\begin{aligned} \mathcal{O}_{Pol} &= 0 \\ s_{Pol}(x) &= x + 1 \\ plus_{Pol}(x, y) &= 2x + y + 1 \end{aligned}$$

\Rightarrow proves termination

Dependency Pairs [Arts & Giesl 2000, ...]

\mathcal{R}_{div} :

$$\begin{aligned} \text{minus}(x, \mathcal{O}) &\rightarrow x \\ \text{minus}(\text{s}(x), \text{s}(y)) &\rightarrow \text{minus}(x, y) \\ \text{div}(\mathcal{O}, \text{s}(y)) &\rightarrow \mathcal{O} \\ \text{div}(\text{s}(x), \text{s}(y)) &\rightarrow \text{s}(\text{div}(\text{minus}(x, y), \text{s}(y))) \end{aligned}$$

Dependency Pairs [Arts & Giesl 2000, ...]

 \mathcal{R}_{div} :

$$\begin{array}{ll} \text{minus}(x, \mathcal{O}) & \rightarrow x \\ \text{minus}(s(x), s(y)) & \rightarrow \text{minus}(x, y) \\ \text{div}(\mathcal{O}, s(y)) & \rightarrow \mathcal{O} \\ \text{div}(s(x), s(y)) & \rightarrow s(\text{div}(\text{minus}(x, y), s(y))) \end{array}$$

- There exists no monotonic, natural *Pol* that orders all rules strictly

Dependency Pairs [Arts & Giesl 2000, ...]

 \mathcal{R}_{div} :

$$\begin{array}{ll} \text{minus}(x, \mathcal{O}) & \rightarrow x \\ \text{minus}(s(x), s(y)) & \rightarrow \text{minus}(x, y) \\ \text{div}(\mathcal{O}, s(y)) & \rightarrow \mathcal{O} \\ \text{div}(s(x), s(y)) & \rightarrow s(\text{div}(\text{minus}(x, y), s(y))) \end{array}$$

- There exists no monotonic, natural *Pol* that orders all rules strictly
- Dependency pair approach is able to prove termination

Dependency Pairs [Arts & Giesl 2000, ...]

\mathcal{R}_{div} :

Theorem: Chain Criterion [Arts & Giesl 2000]

\mathcal{R} is innermost terminating iff $(\mathcal{DP}(\mathcal{R}), \mathcal{R})$ is innermost terminating

Dependency Pair Framework

- Key Idea:
 - Transform a “big” problem into simpler sub-problems

Dependency Pair Framework

- Key Idea:
 - Transform a “big” problem into simpler sub-problems
- Our objects we work with:
 - DP problems $(\mathcal{D}, \mathcal{R})$ with \mathcal{D} a set of DPs, \mathcal{R} a TRS

Dependency Pair Framework

- Key Idea:
 - Transform a “big” problem into simpler sub-problems
- Our objects we work with:
 - DP problems $(\mathcal{D}, \mathcal{R})$ with \mathcal{D} a set of DPs, \mathcal{R} a TRS
- How do we start?:
 - (Chain Criterion) Use all rules and dependency pairs: $(\mathcal{DP}(\mathcal{R}), \mathcal{R})$

Dependency Pair Framework

- Key Idea:
 - Transform a “big” problem into simpler sub-problems
- Our objects we work with:
 - DP problems $(\mathcal{D}, \mathcal{R})$ with \mathcal{D} a set of DPs, \mathcal{R} a TRS
- How do we start?:
 - (Chain Criterion) Use all rules and dependency pairs: $(\mathcal{DP}(\mathcal{R}), \mathcal{R})$
- How do we create smaller problems?:
 - DP processors: $Proc(\mathcal{D}, \mathcal{R}) = \{(\mathcal{D}_1, \mathcal{R}_1), \dots, (\mathcal{D}_k, \mathcal{R}_k)\}$

Dependency Pair Framework

- Key Idea:
 - Transform a “big” problem into simpler sub-problems
- Our objects we work with:
 - DP problems $(\mathcal{D}, \mathcal{R})$ with \mathcal{D} a set of DPs, \mathcal{R} a TRS
- How do we start?:
 - (Chain Criterion) Use all rules and dependency pairs: $(\mathcal{DP}(\mathcal{R}), \mathcal{R})$
- How do we create smaller problems?:
 - DP processors: $Proc(\mathcal{D}, \mathcal{R}) = \{(\mathcal{D}_1, \mathcal{R}_1), \dots, (\mathcal{D}_k, \mathcal{R}_k)\}$
 - $Proc$ is sound:
 - if all $(\mathcal{D}_i, \mathcal{R}_i)$ are innermost terminating,
then $(\mathcal{D}, \mathcal{R})$ is innermost terminating

Dependency Pair Framework

- Key Idea:
 - Transform a “big” problem into simpler sub-problems
- Our objects we work with:
 - DP problems $(\mathcal{D}, \mathcal{R})$ with \mathcal{D} a set of DPs, \mathcal{R} a TRS
- How do we start?:
 - (Chain Criterion) Use all rules and dependency pairs: $(\mathcal{DP}(\mathcal{R}), \mathcal{R})$
- How do we create smaller problems?:
 - DP processors: $Proc(\mathcal{D}, \mathcal{R}) = \{(\mathcal{D}_1, \mathcal{R}_1), \dots, (\mathcal{D}_k, \mathcal{R}_k)\}$
 - $Proc$ is sound:
 - if all $(\mathcal{D}_i, \mathcal{R}_i)$ are innermost terminating,
then $(\mathcal{D}, \mathcal{R})$ is innermost terminating
 - $Proc$ is complete:
 - if $(\mathcal{D}, \mathcal{R})$ is innermost terminating,
then all $(\mathcal{D}_i, \mathcal{R}_i)$ are innermost terminating

$$\begin{array}{ll} \stackrel{i}{\overrightarrow{\Rightarrow}}_{\mathcal{R}_3} & \{1 : f(\mathcal{O})\} \\ \stackrel{i}{\overrightarrow{\Rightarrow}}_{\mathcal{R}_3} & \{1 : f(a)\} \\ \stackrel{i}{\overrightarrow{\Rightarrow}}_{\mathcal{R}_3} & \{1/2 : f(b), 1/2 : f(c)\} \end{array}$$

Sequence with $(\mathcal{DT}(\mathcal{R}), \mathcal{R})$:

$$\begin{array}{ll} \stackrel{i}{\overrightarrow{\Rightarrow}}_{\mathcal{DT}(\mathcal{R}_3)} & \{1 : F(\mathcal{O})\} \\ \stackrel{i}{\overrightarrow{\Rightarrow}}_{\mathcal{DT}(\mathcal{R}_3)} & \{1 : \text{Com}(F(a), A)\} \end{array}$$

Coupled Dependency Tuples: Sound

$$\begin{array}{lll}
 \mathcal{R}_3 : & f(\mathcal{O}) & \rightarrow \{1 : f(a)\}, \\
 & a & \rightarrow \{1/2 : b, 1/2 : c\} \\
 \mathcal{DT}(\mathcal{R}_3) : & \langle F(\mathcal{O}), f(\mathcal{O}) \rangle & \rightarrow \{1 : \langle \text{Com}(F(a), A), f(a) \rangle\} \\
 & \langle A, a \rangle & \rightarrow \{1/2 : \langle B, b \rangle, 1/2 : \langle C, c \rangle\}
 \end{array}$$

Sequence with \mathcal{R} :

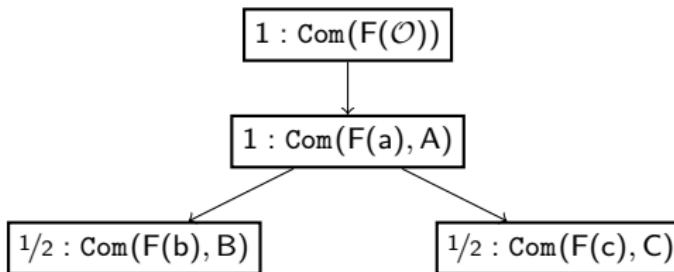

$$\begin{array}{ll}
 \stackrel{i}{\overrightarrow{\Rightarrow}}_{\mathcal{R}_3} & \{1 : f(\mathcal{O})\} \\
 \stackrel{i}{\overrightarrow{\Rightarrow}}_{\mathcal{R}_3} & \{1 : f(a)\} \\
 \stackrel{i}{\overrightarrow{\Rightarrow}}_{\mathcal{R}_3} & \{1/2 : f(b), 1/2 : f(c)\}
 \end{array}$$

Sequence with $(\mathcal{DT}(\mathcal{R}), \mathcal{R})$:

$$\begin{array}{ll}
 \stackrel{i}{\overrightarrow{\Rightarrow}}_{\mathcal{DT}(\mathcal{R}_3)} & \{1 : F(\mathcal{O})\} \\
 \stackrel{i}{\overrightarrow{\Rightarrow}}_{\mathcal{DT}(\mathcal{R}_3)} & \{1 : \text{Com}(F(a), A)\} \\
 \stackrel{i}{\overrightarrow{\Rightarrow}}_{\mathcal{DT}(\mathcal{R}_3)} & \{1/2 : \text{Com}(F(b), B), 1/2 : \text{Com}(F(c), C)\}
 \end{array}$$

Probabilistic Chain

$$\begin{array}{lll} \mathcal{R}_3 : & f(\mathcal{O}) & \rightarrow \{1 : f(a)\}, \\ & a & \rightarrow \{1/2 : b, 1/2 : c\} \\ \mathcal{DT}(\mathcal{R}_3) : & \langle F(\mathcal{O}), f(\mathcal{O}) \rangle & \rightarrow \{1 : \langle \text{Com}(F(a), A), f(a) \rangle\} \\ & \langle A, a \rangle & \rightarrow \{1/2 : \langle B, b \rangle, 1/2 : \langle C, c \rangle\} \end{array}$$

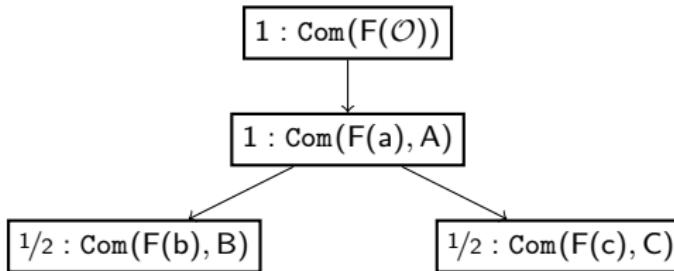

Chain: On every path, we use a dependency pair after a finite number of steps.

$$(\xrightarrow{\mathcal{D}}^i \circ \xrightarrow{\mathcal{R}}^*)$$

Probabilistic Chain

$$\begin{array}{lll} \mathcal{R}_3 : & f(\mathcal{O}) & \rightarrow \{1 : f(a)\}, \\ & a & \rightarrow \{1/2 : b, 1/2 : c\} \\ \mathcal{DT}(\mathcal{R}_3) : & \langle F(\mathcal{O}), f(\mathcal{O}) \rangle & \rightarrow \{1 : \langle \text{Com}(F(a), A), f(a) \rangle\} \\ & \langle A, a \rangle & \rightarrow \{1/2 : \langle B, b \rangle, 1/2 : \langle C, c \rangle\} \end{array}$$

Chain: On every path, we use a dependency pair after a finite number of steps.

$$(\xrightarrow{\mathcal{D}}^i \circ \xrightarrow{\mathcal{R}}^*)$$

Theorem: Chain Criterion

\mathcal{R} is innermost AST if $(\mathcal{DT}(\mathcal{R}), \mathcal{R})$ is innermost AST
